In second issue of Journal of Physical Medicine, Rehabilitation, and Electrodiagnosis (JPMRE), common topics of the field are discussed and different aspect of rehabilitation medicine are addressed. Application of therapeutic exercise in pain syndromes and electrodiagnostic medicine finding in common and uncommon processes such as diabetes mellitus, and case report of isolated nerve injury are among these topics. Nowadays, with emergence of new therapeutic

rehabilitation procedures and techniques, many researches are enrolled. Because of extensive and increasing trend of evidence-based practice, it is needed to devote significant part of the journal to this type of articles. I hope the readers and all rehabilitation professional gain from this issue and take part in upcoming issues.
