

Inaugural Editorial

Seyed Mansoor Rayegani¹

¹ Professor, Department of Physical Medicine and Rehabilitation Medicine, School of Medicine AND Physical Medicine and Rehabilitation Research Center, Shahid Beheshti University of Medical Sciences, Tehran, Iran

Publication of new findings and experiences regarding the various science fields is one of the most effective and well-known methods to expand and deepen these fields. Due to their wide variety, scope, and variety of diagnostic and therapeutic methods, medical sciences, especially the clinical specialties, are increasingly changing. Rehabilitation science is no exception in this regard. The clinical specialty of physical medicine and rehabilitation is one of the most diverse and growing fields of medicine. Different diagnostic and treatment areas of this field regarding the ailments and diseases of the skeletal, nervous, and muscular systems, as well as the teamwork on the rehabilitation of various disabilities and also the various methods of electrodiagnosis (EDX), provide a wide area of research for the scholars. Despite the significant number of physicians in the physical medicine and rehabilitation field

worldwide, as well as the variety of related training and research centers, the number of international journals to cover all areas of this field is not sufficient. The main purpose of publishing the Journal of Physical Medicine, Rehabilitation, and Electrodiagnosis is to provide a valuable scientific environment for the release of studies as well as the experiences of experts in this field around the world. In the design of structure of the journal, a special editor has been considered for each of the relevant fields, so that there is enough expertise in reviewing the articles. This journal is ready and willing to accept research topics based on the journal's views from all researchers in the field of rehabilitation science.
